KEY INVESTMENT POINTS

- KREKA Group is currently one of the leading meat producers and traders in Greece operating modern facilities, including feeding, slaughtering and packaging units in Northeast Greece, whereas its wholesale network extends across the country.
- As of February 2007, KREKA acquired the remaining 59% stake of subsidiary "G. Dellas – P. Tsakanikas" for a total consideration € 3.5 million. The total acquisition cost for the 100% of the company amounted to € 6.3 million. Since February 2007, KREKA consolidates its fully owned subsidiary based on the acquisition accounting (purchase) method. The above acquisition allows KREKA to assume full control on its subsidiary and exploit growth opportunities both as a meat producer and as a wholesale trader.
- During 2006, the Company initiated a plan to create a unit for utilization of by-products following the slaughtering phase of production. The unit will be operating as a recycling center utilizing by-products and producing biogas. The latter will be used for the generation of thermal and electric power, consumed in a later stage from the Company's production units. The ultimate purpose of the unit will be to protect the environment by recycling meat by-products or remaining parts.
- Following the acquisition, the Group's outlook remains positive with prospects of further market share expansion arising even stronger. In anticipation of more concrete results in the future, we initiate KREKA's coverage with a neutral rating.

INVESTMENT CASE & GROWTH DRIVERS

KREKA Group is currently one of the leading meat producers and traders in Greece, operating modern facilities, including feeding, slaughtering and packaging units in Northeast Greece, whereas its wholesale network extends across the country.

The recent acquisition of the remaining stake of “G. Dellas – P. Tsakanikas” allows KREKA to assume full control on its subsidiary and exploit growth opportunities both as a meat producer and as a wholesale trader.

☞ Growth Drivers of Parent Company KREKA SA

Calf Feeding & Production: KREKA has vertically organized the production of standardized meat from calves. The Company purchases calves of 500-600 kilograms at a young age (12-18 months) mainly from France and from internationally recognized suppliers such as Deltagro SA, feeds them until a certain age (when they become 18-22 months and weigh 700-750 kilograms) and then produces final meat. The quality of products and the security control of procedures are certified by domestic and international institutions.

The grown animal with weight of 750 kilograms may produce meat of approximately 420 kilograms (implying a return ratio of 60%). The purchasing price of the young animals may range between € 2.5-2.7 per kilogram whereas the selling price may range between € 4.6-6.0 per kilogram depending on the final product. The Company utilizes a capacity of 1,800 calves per annum, while it operates its own production unit of animal food.

In our model, calves are expected to represent 24.5% of total consolidated turnover at the end of our 5-year projected period, 2011, growing at a CAGR (2006-2011) of 3.7%.

Cows: The Company purchases livestock from the domestic market and after the slaughtering phase it sells final meat products. **In our model, we assume revenues from cows to account for 2.9% of total consolidated turnover at the end of our 5-year projected period, 2011, growing at a CAGR ⁽²⁰⁰⁶⁻²⁰¹¹⁾ of 1.85%.**

Pigs: The Company purchases livestock, at a price range of € 1.0-1.4 per kilogram, from the domestic market and after the slaughtering phase it distributes final products at a price range of € 2.0-2.7 per kilogram. The return ratio of this process is estimated at 70%. **In our model, we assume revenues from pigs to account for only 2.3% of total consolidated turnover at the end of our 5-year projected period, 2011, growing at a CAGR ⁽²⁰⁰⁶⁻²⁰¹¹⁾ of 1.85%.**

Lamb: KREKA purchases livestock, at a price around € 5.0 per kilogram, from the domestic market and after the slaughtering phase it distributes final products at a price around € 6.0 per kilogram. The return ratio of this process is estimated at 60%. **In our model, we assume revenues from lamb to account for 5.1% of total consolidated turnover at the end of our 5-year projected period, 2011, growing at a CAGR ⁽²⁰⁰⁶⁻²⁰¹¹⁾ of 2.80%.**

Finally, the Company plans to co-operate with franchisees in order to establish a retail network under the name “KREOTOPIA”. Currently there are no retail shops under that name. The strategic objective of such a network would be to target the niche market of consumers interested on meat products that carry brand name and quality certificate stamp.

☞ **Gradual Brand Name Recognition**

The Company places great emphasis on quality deriving from its certified production process. This strategy is steadily upgrading the brand name KREKA, with Greek consumers steadily recognizing the quality of the Company’s meat.

☞ Customer Approach with Emphasis on Quality

Emphasis on quality and customer services has been a major axis of the Company's expansion in the market place. KREKA is certified by various domestic and international institutions for the production safety and the quality of final products, thus meeting even the strictest customer requirements. The Company focuses on the following missions:

- ❖ Maintenance of high quality standards based on international practices;
- ❖ Disclosure of the origins of its products ("Product with Identity");
- ❖ Provision of specialized services to wholesale and retail customers;
- ❖ Building of an ever stronger consumer confidence.

The Major Axes of KREKA's Strategy	
	Vertical integration of operations
	Efficient control of production process
	High quality and safety standards
	Environmental management system complied with E.U. regulations
	Cost savings

KREKA'S MERGER WITH "G. DELLAS – P. TSAKANIKAS"

Since 2001, KREKA SA held 41% of "G. Dellas – P. Tsakanikas SA" a meat trader that also operates a slaughtering unit in Northeast Greece. On 15 February 2007, KREKA acquired the remaining 59% stake for a total consideration € 3.5 million paid in installments until the end of 2007. The total acquisition cost for the 100% of the company amounted to € 6.3 million. Since February 2007, KREKA consolidates its fully owned subsidiary based on the acquisition accounting (purchase) method. As of 15 February 2007, the subsidiary's assets amounted to € 6.425 million with total liabilities at € 4.313 million. The difference between the acquisition cost (€ 4.6 million) and the subsidiary's net worth (around € 2.1 million) appears in KREKA's consolidated financial statements as goodwill.

The two companies are under a merger phase according to an agreement signed on 29 May 2007. The merger date has been set on 31 March 2007, when the financial statements of "G. Dellas – P. Tsakanikas" were compiled. The new merged company will be called "KREKA SA".

In our model, the subsidiary's sales are expected to represent 63.4% of total consolidated turnover at the end of our 5-year projected period, 2011, growing at a CAGR ₍₂₀₀₇₋₂₀₁₁₎ of 9%.

Please note that we value KREKA on consolidated ongoing concern basis. We make no assumptions regarding the imminent merger of the parent company with its fully owned subsidiary "G. Dellas – P. Tsakanikas SA". In this context, we assume the total number of common shares at 7,125,216.

We view the above merger as a positive development due to the following factors:

- ❖ KREKA enters dynamically in the wholesale market of Athens, Greece's capital, by fully controlling and operating warehouse facilities and meat shop. The central meat market of Rentis is nowadays the heart of the

domestic market, therefore the Company's presence would maximize revenue generation from a broader customer base;

- ❖ At the same time, through the subsidiary's network, KREKA's meat products reach directly meat shops across Greece, such as in Ipiros, Central Greece, Peloponnesus, and Aegean islands;
- ❖ The merger is expected to generate synergies in terms of costs and at the same time to benefit the new entity, since the subsidiary's activities are complementary to the ones of the parent company;
- ❖ The trading activities may benefit the overall financial outlook of the Company as they would improve the working capital cycle and its cash flows.

It is noted that "G. Dellas – P. Tsakanikas SA" owns production facilities, whereas it leases facilities and meat shop in the central meat market of Rentis, Athens. The company employs 30 persons.

G. Dellas - P. Tsakanikas

(*) : Consolidated accounts refer to the parent company "KREKA SA" and the subsidiary "G. Dellas - P. Tsakanikas SA" for the period 2007 - 2011.

Financial year 2006 refers only to the parent company. Sales is before intra-group transactions for 2006, and after intra-group transactions for 2007-2011.

FINANCIAL ANALYSIS

[Following the consolidation of KREKA SA (the parent Company) with the fully owned subsidiary “G. Dellas – P. Tsakanikas” we perform the analysis & valuation of KREKA Group on consolidated ongoing concern basis.]

☞ Profit & Loss Account

Turnover: We anticipate consolidated turnover to amount to € 24.88 million in 2007 and reach € 32.33 million by the end of the projected 5-year period, implying a CAGR ₍₂₀₀₇₋₂₀₁₁₎ 6.76%.

Related Party Transactions (RPTs): Sales between the parent company and subsidiary “G. Dellas – P. Tsakanikas” accounted for € 0.647 million in H1 2007 versus € 1.308 million in H1 2006. Consolidated turnover is presented after the deduction of RPTs.

Gross Profit Margin: Following the Group’s vertical integration and the rising purchasing as well as selling power, we would anticipate KREKA to exploit a stronger competitive advantage in the domestic market place. Therefore we would expect a gradual enhancement of gross profit margin during the period 2007-2011.

Operating Expenses: Group’s operating expenses are projected to range between 5.6% - 5.8% of total consolidated turnover during the 5-year period, growing on lower average pace than turnover. By this way, the Group will be in a position to facilitate its vertical integration and expansion of activities as well as to strengthen the distribution network across Greece.

Earnings before Interest, Tax and Amortization (EBITDA): We expect an EBITDA CAGR ₍₂₀₀₇₋₂₀₁₁₎ of 9.35% boosted by the higher gross profit margin and the operating cost control applied by the Group over the period.

Income Tax: The nominal tax rate has dropped at 25% since 1/1/2007 from 29% previously. In our assumptions, we use the new rate as the effective tax for the period 2007-2011.

☞ Balance Sheet

Biological Assets: The Company's biological assets refer to livestock held for breeding and slaughtering. KREKA trades only raw meat and not livestock. The Company purchases livestock from third parties, mainly abroad, for breeding purposes in its own facilities. No birthing activity takes place within the Company's facilities. The breeding phase lasts several months before the slaughtering stage. In addition, there are purchases of living animals solely for slaughtering purposes (no breeding phase exists in this case).

KREKA records those assets as biological assets based on current market prices from comparable animals. The following table presents the valuation of those assets in the 1st half 2007:

Biological Assets <i>(in € ,000s)</i>	IFRS Accounts 1/1-30/06/2007	IFRS Accounts 1/1-30/06/2006
Inventory at beginning of period	2,095	1,709
Purchases for the period	2,061	3,555
Less: Sale of biological assets	-7	
Less: Inventory for production	-3,275	-3,618
Change in fair value of biological assets	568	643
Balance at end of period	1,442	2,289

Source: Consolidated Financial Statements under IFRS.

[Please note that since the parent Company is the only one possessing biological assets, the inventories are the same on both parent and consolidated level.]

Bank Debt: Following an arrangement with the Greek State, KREKA restructured its total bank debt as of 30 June 2006, into a 10-year loan carrying an 80% guarantee granted by the Greek State. The loan's interest rate is determined by the corresponding rate of Greek treasury bills, which is then increased by 70% plus a contribution rate of 0.6%. The loan's interest rate is subsidized by 50% until 31/12/2009, whereas the repayment will be made in 6-month installments.

KREKA's assets, up to the loan's amount, have been placed as collateral in favor of the Greek State. As of 30/6/2007, total long-term debt had settled € 9.019 million on both parent and group level.

Source: Company accounts, VRS estimates.

☞ Cash Flow Analysis

Although the nature of business would imply an even higher stock turnover ratio, KREKA achieved in maintaining a more efficient cash cycle, settling at 82 days for the 6-month period of 2007. We view this development as satisfactory since it positively affected the Group's cash flows, however we don't treat it as a sustainable one.

The Group's cash cycle is largely affected by the long product cycle due to the animal feeding stage as well as by agreements made with the customer base and the suppliers in the domestic market. As we do not expect any radical change in those agreements we would assume that KREKA Group undertakes a significantly higher financial leverage in the following years to fund the extended working capital cycle.

The following tables present our calculations in order to derive KREKA Group's cash cycle in the 6-month periods of 2007 and 2006.

<i>in EUR thous.</i>	30/6/2007	30/6/2006
Inventory	2,390	2,850
Customer Receivables	5,755	2,694
Cash	331	650
Creditors	3,340	1,499
Sales	10,501	5,747
Cost of Sales (*)	9,404	5,148
Stock Turnover Ratio (days)	46	101
Debtor Turnover Ratio (days)	100	86
Creditor Turnover Ratio (days)	65	53
Current Ratio	2.54	4.13
Accid Ratio	1.82	2.23

(*) Without depreciation.

	30/6/2007	30/6/2006
Stock arrives (day)	0	0
Goods sold (day)	46	101
Creditors / Stock Paid (day)	65	53
Debtors Received (day)	146	187
W. C. CYCLE	82	133

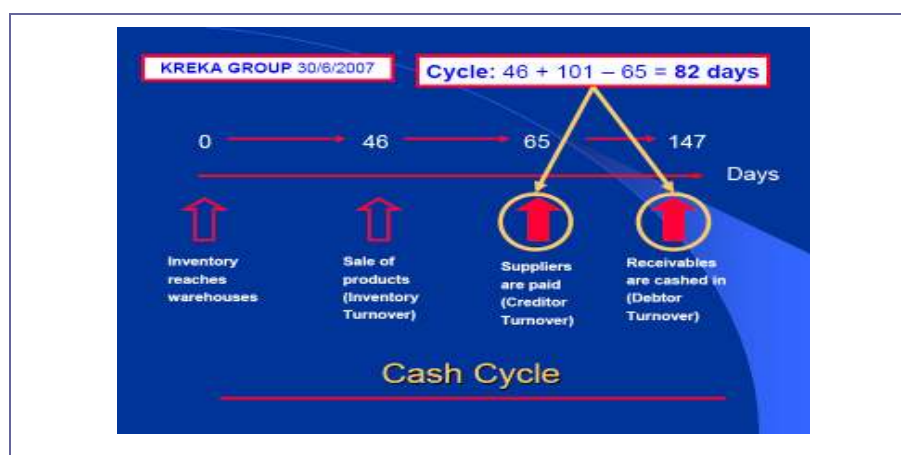

Source: Consolidated accounts & VRS calculations.

On a group level, it becomes evident that KREKA improves the cash cycle since it consolidates the trading activity of its subsidiary, thus offsetting the long cash cycle accompanying the animal feeding activity.

CHART

KREKA's Working Capital Cycle in Days – Year 2006

Source: VRS.

CAPITAL EXPENDITURES**☛ Future Objectives**

KREKA's capital expenditure plan aims at the following directions:

- ❖ Market share expansion and vertical integration of operations, ranging from animal feeding to final meat products for the retail market;
- ❖ Constant upgrade of quality standards and expansion of product range in an effort to satisfy the constantly changing consumer needs;
- ❖ More efficient environmental management with parallel cost savings.

During 2006, the Company initiated a plan to create a unit for utilization of by-products following the slaughtering phase of production. The unit will be operating as a recycling center utilizing by-products for the production of biogas. The latter will be used for the production of thermal and electric power, consumed in a later stage from the Company's production units.

However, the ultimate purpose of the unit will be to protect the environment by recycling meat by-products or remaining parts not only from the Company's production process but also from third parties. KREKA is expected to comply with European Union regulations concerning environmental management and also receive an environmental management certificate according to ISO 14001:2004. Apart from generating energy, the unit (SRS-500) will be producing organic fertilizers for farmers.

The total investment is expected to reach € 2.75 million and has been subsidized under the Greek Law by approximately € 1.3 million. According to the management, the unit will complete by the end of 2007.

The Company is also planning the creation of a product standardization unit in order to distribute packaged meat to the retail market with the following characteristics:

- ❖ Longer product life under cooling conditions, up to 15 days;
- ❖ Meat products carrying a recognized brand name;
- ❖ Ability of tracing the product's origination;
- ❖ Protection and security for consumer.

As it was mentioned previously, in the beginning of 2007, KREKA SA acquired the remaining 59% stake of “G. Dellas – P. Tsakanikas SA” for a total consideration € 3.5 million paid in installments until the end of 2007. The total acquisition cost for the 100% of the company amounted to € 6.3 million. Since February 2007, KREKA consolidates its fully owned subsidiary based on the acquisition accounting (purchase) method. On parent level, KREKA records its participation based on the acquisition cost.

In our forecasting model, we assume capital expenditures of € 0.53 million per annum for the period 2008-2011, reflecting the Group’s efforts to modernize production facilities and strengthen the distribution network.

☞ **Review of Investments Implemented**

During the period 2003 – 2006, KREKA proceeded with the following investment actions:

- ❖ Upgrade of information technology infrastructure;
- ❖ Application of barcode system during production;
- ❖ Sale of equity holdings, 25% of Deltagro (2004) and 61.66% of Tsatsoulis Bros (2005);
- ❖ Production of mince meat through animal bones;
- ❖ Renovation of stabling facilities;
- ❖ Modernization of production machinery valued at € 880,000.

DEVELOPMENTS IN 1ST HALF 2007

KREKA published first half consolidated financial results under IFRS on August 30th, 2007 covering the period 1 January until 30 June 2007. The financial results are presented below:

Income Statement <i>(in € ,000s)</i>	IFRS Accounts 1/1-30/06/2007	<i>Change (%)</i>	IFRS Accounts 1/1-30/06/2006
Sales	10,501	82.74%	5,747
EBITDA	890	52.82%	582
Operating Expenses	711	139.46%	297
Financial Expenses	-304	554.02%	-47
EBT	137	-42.23%	238

COMPANY PROFILE

“KREKA KIOUTSOUKOSTAS BROS S.A.” was established in 1985 with domicile in County of Kavala, Northeast Greece. The Company engages in the following activities:

- ❖ Breeding and fattening of calves;
- ❖ Slaughtering and production of raw meat;
- ❖ Wholesale trade of own produced or from third party purchased meat;
- ❖ Retail trade of meat.

☞ **The Production Process**

KREKA imports calves at an age between 12-18 months, ensuring the transport and acclimatization of animals with the minimum loss for the Company. Deltagro SA from France is a major supplier of “Charolais” and “Limousine” calves, which are considered among the best in quality in the world. The above races demonstrate strong biological characteristics, such as the capability for maximum development under the conditions of good nutrition and stabling. Prior to or during the transportation, the Company proceeds with rigorous hygienic inspections and certifies the healthy status of the calves.

Breeding & Fattening: As soon as the animals arrive at the KREKA’s facilities, an intensive fattening process is under-way. The nutrition of the animals is performed with green corn (processed and conserved under certain temperature and humidity, without chemical substances), straw wheat (for easier digestion) and other food elements such as barley, soya, vitamins, etc. The food utilized for animal’s fattening is locally produced under the supervision of KREKA, whereas the Company’s agronomist closely monitors the level of quality.

Slaughtering: The calves are slaughtered at an age of 18-22 months as soon as their weight accounts for 700-750 kilograms approximately. The maximum the quality of their nutrition, the higher the ratio “weight / age”. KREKA aims at maximizing the soft red meat produced from the fattening process by constantly providing clean, airy and sunny cages, along with the high quality food. The slaughtered animals are then placed into special refrigerators for 24 hours in the Company’s facilities, before they are distributed via refrigerator vans to all over Greece. The Company’s slaughtering phase follows the European law and is signed by the European Union with the code S37.

Packaging Process: The slaughtered animals remaining within the facilities are then cut into pieces, boned, sterilized and kept into vacuum packaging, which includes the following details: the animal code, the country of origin, the place of fattening and slaughtering, the packaging code, the part of the animal body, the weight, the packing and the consumption date. The European Union has certified the Company’s packaging unit, which has placed in effect all current sanitary regulations of the meat market (code A38). After packaging, KREKA’s products are delivered to a great range of selling points, such as supermarkets, retail chains, meat shops, as well as to the Company’s own retail network.

The Critical Role of Vets: The Company has ensured the critical role of vets is constantly performed during the breeding, fattening, slaughtering, packaging and transportation stages, whereas there are regular inspections from veterinary surgeons of the civil service. Furthermore, during transportation, all meat products carry a veterinary inspection certificate according to European regulations.

☞ **The Distribution Network**

Wholesale Trade: The Company utilizes the largest part of own meat production as well as of meat purchased from third parties (fresh veal, pig meat, lambs and goats) for wholesale trade. KREKA owns a fleet of refrigerator vans which distributes all the above products in the central meat markets of the two largest Greek cities, Athens which is the capital, and Thessalonica.

From those two central markets, products are delivered not only to retail shops but also to great number of wholesalers in the rest of Greece (Macedonia, Thrace, Thessaly, Peloponnesus, Crete, etc.). On aggregate basis, KREKA's products reach over 200 trade destinations in the country.

Retail Network: The Company plans to co-operate with franchisees in order to establish a retail network under the name "KREOTOPIA". Currently there are no retail shops under that name. The strategic objective of such a network can be highlighted by the following principles:

- ❖ Creation of attractive differentiated butcher and delicatessen shops;
- ❖ Retail trade of products based on entrepreneurial skills;
- ❖ Strong customer satisfaction;
- ❖ High quality of products.

☞ Quality & Security

KREKA has complied with strict quality regulations having implemented a quality assurance system according to ISO 9001: 2000. The system covers areas such as supplying of raw materials, production, quality control, distribution, and customer service.

The Company has been also certified with system HACCP, according to which there is a documented process in the whole production, from the utilization of raw materials up to the final stages of production.

Furthermore, following a certification from Agrocert (an organization of certification and supervision of agricultural products), KREKA has been authorized from the Greek Ministry of Agriculture to use a sign with the indication "Quality Meat" on its products.

Not only has KREKA been certified by domestic and international institutions for its quality but it has also been acknowledged as a constant user of biologically extracted food for animal feeding. Greenpeace has certified that KREKA's animal feeding materials are free from genetically engineered organisms, they don't contain chemical pesticides and they are produced from animals breed without antibiotics or hormones. Thus, the Company has been classified under the "Green Category". According to the new catalogue of Greenpeace, the Company has been certified with the registration number 049060004.

Finally, TUV Hellas has certified KREKA with EL0T EN ISO 22000: 2005, which is a food safety management system covering the following areas:

- ❖ Slaughter of bovine, pigs, lambs and goats;
- ❖ Production, processing and standardization of fresh and frozen meat;
- ❖ Production of meat preparations and minced meat.

Production Facilities

4 feeding units with annual capacity of 10,000 animals

Production unit of animal food

Slaughtering unit with 3 lines with capacity
of 15 calves, 50 pigs and 100 lambs per hour (total area of 3,500 m²)

Processing & standardization unit (15 carcasses per hour)

SRS unit (operation commenced in January 2007)

Biogas production unit (under construction)

RISK FACTORS

Investment Risks / Concerns	Mitigating Factors / Important Notes
<p>1 The successful operating merger of the parent company and its subsidiary is a critical development determining the new entity's outlook in the domestic meat market. Any delays on this front might significantly affect financial targets.</p>	<p>There is no evidence of any abnormality in the merger process so far. The acquired company was activating as KREKA's subsidiary since 2001.</p>
<p>2 There are periods in time when the composition of meat output is dramatically shifted towards poultry meat to the expense of pork and beef.</p>	<p>The current period favors consumption of all meat types with poultry meat arising as the laggard.</p>
<p>3 According to surveys, rapid growth of meat production implies a steep environmental price. It is estimated the environmental costs per unit of livestock production must be cut by one half by all market participants.</p>	<p>KREKA has proceeded with investments in recycling units in order to tackle efficiently the issue of environmental costs.</p>
<p>4 Consumers appear especially sensitive to the effects caused in the global food chain due to the use of biogenetics in the production of meat.</p>	<p>KREKA's meat product is not based on biogenetical engineering. The Company utilizes animal food which are free from genetically engineered substances and do not contain chemical pesticides, antibiotics or hormones.</p>

MANAGEMENT'S GUIDANCE & DYNAMIC'S VIEW

	Management's Guidance	Dynamic's View
1	Following the acquisition of 100% of the subsidiary company, KREKA has given guidance (as of August 2007) of consolidated turnover reaching € 24.4 million in 2007 and 28.0 million in 2008. Furthermore, they expect earnings before taxes of € 530,000 and earnings after taxes of € 400,000 in 2007.	In view of the Group's financial results during the first half 2007, we view the targets of 2007 and 2008 as feasible, although we prefer to remain on the conservative side of our projections.
2	The completion of the Company's biogas unit by the end of 2007 is expected to generate significant cost savings.	We have made no assumptions with regard to this development due to insufficient knowledge at this stage.
3	The parent Company KREKA SA is about to merge with subsidiary "G. Dellas – P. Tsakanikas" within the following weeks to form a new entity.	Our assumptions have been made on the basis of consolidated accounts of KREKA Group (parent company and fully owned subsidiary), without merging the 2 companies.
4	According to the management, the goodwill paid for fully acquiring "G. Dellas – P. Tsakanikas" is likely to be offset by a future share capital increase of € 5-6 million.	We have not made any assumptions in our forecasts regarding a possible share capital increase. Also, we made an assumption that goodwill paid does not affect the cash flows generated by the Company's organic growth.

SECTOR'S OUTLOOK

☞ Developments of the International Meat Market

The global livestock and meat sector is characterized by favorable prospects among the other agricultural sub-sectors. It provides products to about 1.5 – 2.0 billion people and contributes over 40% to global agricultural output. In certain developing markets, livestock are also source of renewable energy as well as source of organic fertilizer for crops.

Over the past 2 decades, the strong and stable economic growth globally has generated increased demand for meat products leading to a higher production. Meat production is increasingly concentrated in 3 major regions: the United States, the European Union and China. The latter is considered to be the largest producer worldwide.

Ultimately, world meat production is likely to be growing within a range of 4%-5% in the following years, buoyed by the rising demand in many emerging and developing economies.

☞ The Greek Meat Sector

With its favorable resource base and gradually modernized livestock and poultry factories, Greece is well situated to take advantage of the rising global demand for meat. The domestic meat sector includes various sub-sectors, each largely fragmented with few leaders and numerous smaller players. Sub-sectors include among others, the meat producers, such as KREKA, meat traders on wholesale basis, retail meat chains, and manufacturers of meat related products (sausages, ham, bacon, etc.).

The major characteristics of the Greek meat sector are presented below:

- ❖ Sector's annual turnover growth has been ranging below 5% on historical basis. It is expected to continue in the same pattern in the following years;
- ❖ The majority of companies are profit making. In particular, of 111 companies publishing financial results for 2005, 85 companies were profit making, whereas only 31 posted earnings growth on annual basis (2005/2004);
- ❖ The sector is financially leveraged with the "debt to equity ratio" ranging between 3-4 times. KREKA is well below the sector's average ratio;
- ❖ The meat producers are characterized by a long working capital cycle;
- ❖ The development law of Greece supports investments by Greek companies relating to production units and warehouse facilities;
- ❖ There is a rising trend of utilizing biologically generated raw materials in the production process;
- ❖ Over the past few years, due to low compliance with quality standards and EU regulations, there were serious instances of inappropriate meat products detrimental to the public health. Sector participants believe that mostly benefited from this threat will be meat producers, such as KREKA, certified for their quality and security compliance.

The following table presents a historical review of Greek sector's financial results (on aggregate basis) in 2005:

The Greek Meat Sector (*) in 2005

Income Statement			
<i>(Sector as Aggregate, in € million)</i>	2005	<i>Change</i>	2004
Sales	751.51	9.41%	686.89

(*) Includes meat producers, traders and producers of related meat products.
The sample accounts for 111 Greek companies.

S.W.O.T. ANALYSIS**Strengths**

- ❖ Leading meat producer in Greece;
- ❖ Vertical integration of operations; Production certified for its quality standards; Production capacity is in excess;
- ❖ Expanding distribution network on both wholesale and retail basis;
- ❖ Investment plan friendly to the environment;
- ❖ Greenpeace classifies KREKA under the green category;

Weaknesses

- ❖ Weak profit margin generation on historical basis;
- ❖ Lack of fully modernized production facilities;
- ❖ Strong competition.

Opportunities

- ❖ Stronger brand name recognition;
- ❖ More dynamic entrance in the wholesale and retail market in Greece in the post acquisition period;
- ❖ Synergies and cost savings due to acquisition;
- ❖ Improving cash cycle due to trading activities;
- ❖ Proximity to new markets, such as Bulgaria, Romania and Serbia;
- ❖ The Company can broaden and diversify the product range.

Threats

- ❖ Lack of success in the completion of the operating merger;
- ❖ Consumer preferences towards various types of meat;
- ❖ Use of biogenetical engineering;
- ❖ Nutrition scandals that can affect demand.
